

BOISE SELECT™ is an engineered panel that provides higher physical properties and a tighter consolidated core than our regular particleboard. With its high internal bond and tight core, some common applications for this product have been slot walls, profiled door inserts and profiled furniture parts. BOISE SELECT™ is a 50# density panel available in standard 4' or 5' widths, as well as a number of custom widths and lengths.

Thickness Range

- 3/8" through 1"
